

STAFFORD TOWER CRANES

BUILDING THE FUTURE TOGETHER

Modern Tower Cranes for a modern world. Flat top and luffing cranes - powerful, reliable and designed to perform.

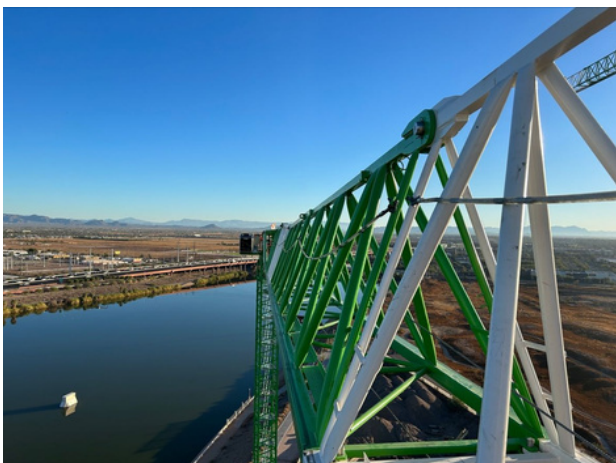

STAFFORD TOWER CRANES (STC) was originally founded in 1977 as SOIMA in Canas de Senhorim, Portugal. Since its early beginnings the company has produced over 7000 cranes, reaching all parts of the world. The Stafford family took full control of SOIMA in 2021 and in June 2024, re-launched the branding of the company to STAFFORD TOWER CRANES. Our DNA is Irish-American and made in Portugal.

Today the factory is under the direct control of the Stafford family, as Derek Stafford, a very well known figure within the tower crane industry for many years and in many countries, heads up the Canas de Senhorim manufacturing plant.

STC fabricates each crane utilizing modern methods and compliance standards. All component and materials used in crane fabrication are sourced from Europe. We also maintain a healthy stock of spare parts to supply our speedy service response team from our Portuguese headquarters.

Our top priority is to provide the very best possible service to our customers, with service centers in both Europe and North America. We manufacture our cranes to meet all current EN norms and international standards, and follow strict safety guidelines.

Our cranes are not only built to last, but also to be assembled and dismantled with ease. We use the latest technology in design and development, which in return offer our customers the most cost effective crane solutions to meet the demanding job site applications.

We also observe how we transport our cranes, offering advice and cost saving solutions on how this can be achieved. All our cranes can be fitted with our 'Smart-Link' system, your assurance we are connected to your crane at all times to offer assistance when needed.

STC has its own engineering division and further support comes from our Milan based design office to make possible the latest and most reliable crane innovations and designs.

Our Commitment to our Clients

- **100% European-Sourced Components** - All materials and parts are fully sourced from Europe, ensuring top-tier quality and reliability.
- **24/7 Global Customer Support** - With service centers across multiple continents, our support team is available around the clock—no matter your location or time zone.
- **Third-Party Spare Parts Access** - Spare parts are readily available through trusted third-party suppliers—no need to go through Stafford directly.
- **Technician Training in Portugal** - On-site training is available at our Portugal factory to ensure your team is fully equipped to operate and maintain our cranes.
- **Comprehensive Tower Crane Range** - From compact projects to major developments, our lineup includes a full range of flat top and luffing jib cranes.
- **Cutting-Edge Technology** - We're committed to staying at the forefront of innovation, delivering the latest advancements the industry has to offer.
- **Complete Engineering Support** - Our engineering services are backed by the expert team at our Portugal facility, and enhanced by the expertise of world-renowned tower crane engineer Lorenzo Nizzolini through our Milan-based design office. We provide hands-on support to help solve even the most complex project challenges.
- **Growing Together** - As we continue to expand, our mission remains the same: to deliver the best products and service in the industry. At Stafford, we never stop striving for perfection.
